Missions		Distribution	JPL	NA	NA	78	L

Notes:

A. Includes data volumes for 3 instruments (AIRS, AMSU, and HSB). The lower L1 production is a result of problems with L0 data delivery.
B. The actual L0 data rate from AMSR-E is 6.6 GB/week. This is lower than ESDIS baseline requirement. Updating of the baselined requirement is in process.
C. The AMSR-E SIPS began receiving continuous data flow from NASDA on 9/3 and expects to receive continuous data for one month (through September). In mid-November, NASDA is scheduled to resume data transmission and continue to for the life of the instrument. Public release of the data products is set for May 2003.
D. Data from these instruments are not transmitted to DAAC daily.
E. Volumes of ASTER L1A and L1B products are a function of production at ERSDAC in Japan. L1A and L1B volumes include the expedited data sets generated at EDC. ASTER L2 products are produced on demand, and the actual volumes may be significantly different from requirements.
F. L1 volume includes reprocessed L1 data volumes for March 2001. Little reprocessing of L2 products was done during this reporting period.
G. Distribution requirements represent the delivered capacity for distribution. Because distribution is based on user orders, the actual distribution volumes may be significantly different from the available capacity.
H. The lower L2-L4 production is a result of completion of the first phase of reprocessing of Ocean products. Reprocessing of atmospheric and land products are scheduled for 10/27 and late November, respectively..
I. Ingest/archival of MODIS L2+ products is dependent on MODAPS reprocessing schedule.
J. MOPITT L2/L3 products are not transmitted to LaRC DAAC daily.
K. Distribution requirements are weekly averages of media distribution volumes based on subscriptions for a full year.
L. Includes distribution of educational materials in addition to AVHRR SST.
M. Little reprocessing of L1 products was done.
N. Does not include distribution by subsetting tool.
O. Does not include distribution by data pool.
P. Orders have decreased sharply with the advent of charging for low-level ASTER data, but distribution remains up as the free data backlog is being worked off.
Q. Values reported here represent what have been archived at DAACs. MODAPS production may be higher.
R. Ingest/archival of MODIS L2+ products is dependent on MODAPS processing schedule.
S. Represents a total for 3 missions (TRMM, Terra, and Aqua).
T. Landsat 7 program changed global coverage and fewer number of scenes were captured by the satellite.
U. Increase in MODAPS production is a result of processing several weeks worth of partial and missing data
V. Archival volumes at GSFC may be lower than actual volumes. Due to software problems, only partial data for 10/18 were captured by EDGRS..

* Baseline requirements refer to the September 2000 EOSDIS technical baseline (i.e., 3 X Baseline means three times the baseline). The QA requirements for distribution are the Level 2 requirements based on inputs from instrument teams (ITs).
